

Solar Pack

With these solar packs we want to facilitate the installation of many individuals and professionals in the sector.

Our business core aren't, solar farms or the KW facilities; we have focused, as you know in the small domestic installations, as maximum 500w.

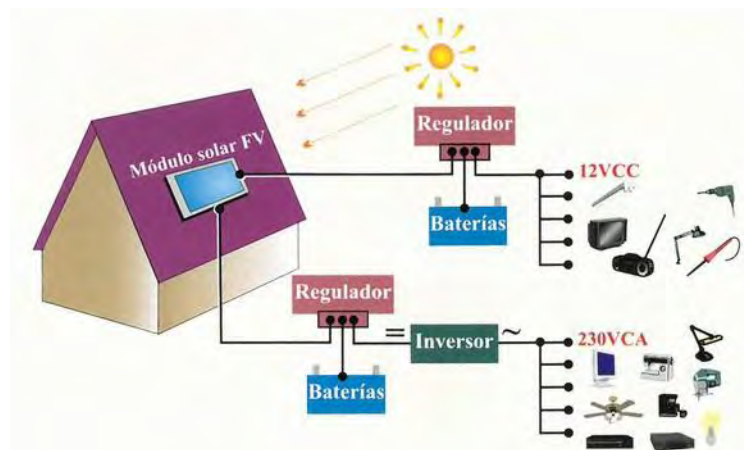

Do it yourself, or ask for help from a professional (DIY).

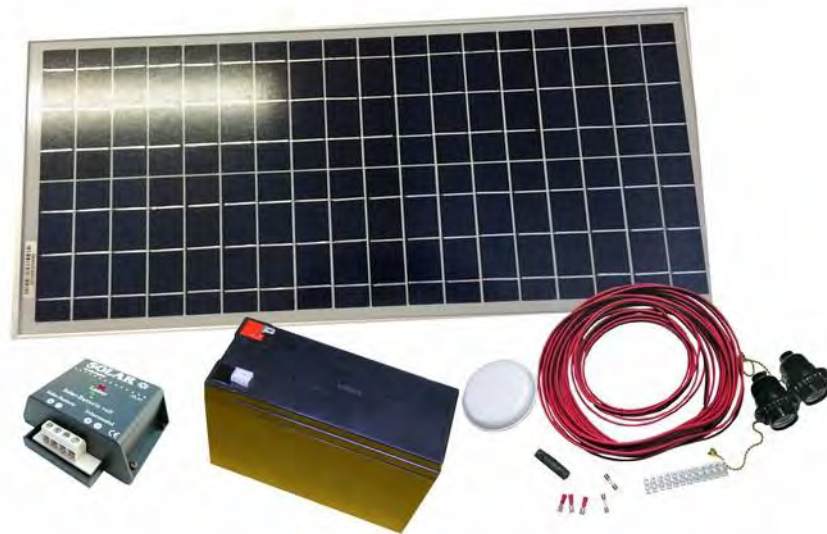

We supply solar panel, battery, solar controller, and all necessary accessories for its installation.

We include cable (10,20, 30 meters, depending on the pack), the lamp holders with switch, terminals, connection box, strips, fuses and fuse holders. You just have to put the LED bulbs, that you like, from 4 to 5 w.

And most important thing, we provide a wiring information and drawing to simplify and facilitate installation.

Ideal for isolated wooden cabins, construction, mountain or temporary huts, etc....
